

# Pipe Activity Log Into Slack

Updated on September 9, 2019

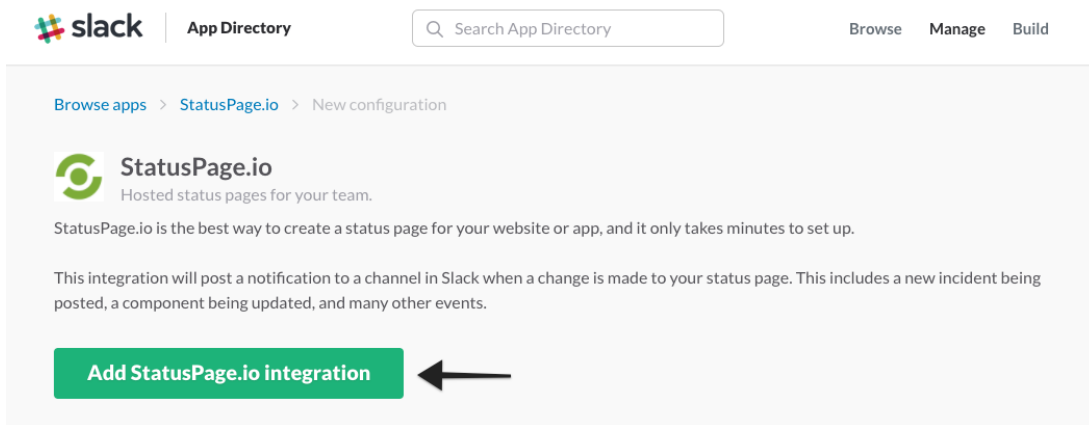

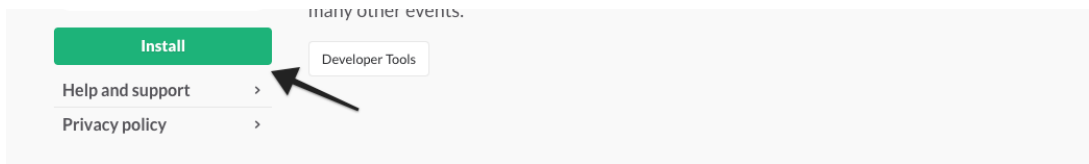

Slack has a great interface, easy setup, and you'll see Statuspage.io on the list of services that they integrate with.

First, you'll need to go to the Apps section and Add the Slack app.

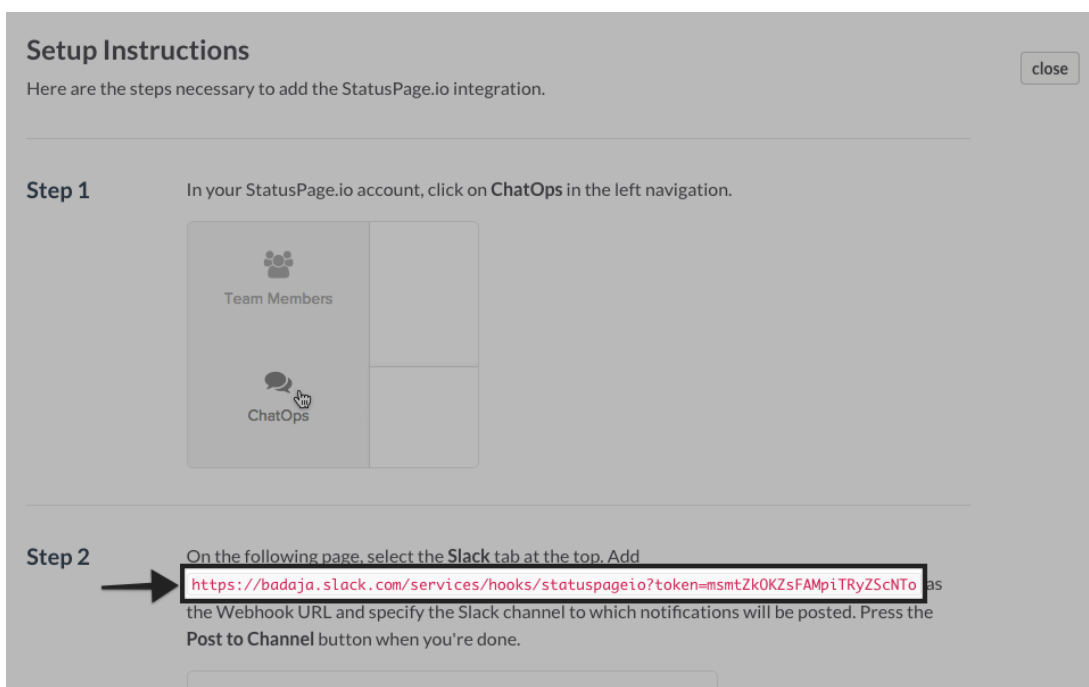

The screenshot shows the Slack App Directory interface. On the left is a sidebar with navigation options: Incidents, Components, System metrics, Customize, Notifications, Apps (selected), Team members, and Status widget. The main area is titled 'Apps' and displays a grid of installed and suggested apps. Installed apps include PagerDuty, Slack, Twitter, and Localize, each with an 'EDIT' button. Suggested apps include Jira Service Desk, Opsgenie, and Intercom, each with an 'ADD' button. Each app card includes a logo, name, a brief description, and a 'Learn more' link.

Next, you'll need to activate the Statuspage.io service in Slack.

The screenshot shows the Slack App Directory page for StatusPage.io. The header includes the Slack logo, 'App Directory', a search bar, and links for 'Browse', 'Manage', and 'Build'. The breadcrumb trail reads 'Browse Apps > StatusPage.io'. The main content area features the StatusPage.io logo, the app name 'StatusPage.io', a description stating it's the best way to create a status page, and a detailed paragraph about the integration: 'This integration will post a notification to a channel in Slack when a change is made to your status page. This includes a new incident being posted, a component being updated, and many other events.'

Copy the Webhook key.

Webhook URL

https://my-team.slack.com/services/hooks/statusp

Edit your Webhook URL. Be careful, this may break posts to existing rooms.

Channel Name

#status|

The name of the channel to post in (space- and case-sensitive, with hash in front).

POST TO CHANNEL

Once your key has been copied, head over to the Apps section of Statuspage and paste in your webhook URL.

Slack

Slack is an application that brings all your team communication into one place. It's real-time messaging, file sharing and archiving, plus it integrates with dozens of services your team is already using. Not to mention, every message that comes into Slack is instantly searchable and available wherever you go!

Here's the [integration guide](#).

Step 1: Add your webhook URL

https://sptestgroup.slack.com/services/hooks/stati

Need help locating this? [Here's where to find it](#).

ADD WEBHOOK URL

Now add the channels you'd like Statuspage to post to.
